- Affordable cameras and VMS system for easy management
- Adavnced WDR Technology to cope with extremely bright and dark areas in a scene(See the Appendix A)
- Unique design and good quality of product
- Superior image quaility

Mission

Prince of Songkla University, a public university established in 1967 is the first university in southern Thailand. The university's highest priority is the safety and security of its students and teachers. In addition, the school's management team has a vision of introducing technology that has the potential to improve the quality of the education provided as well as greatly enhancing security and safety. The main requirement of the system was to monitor locations such as emergency room, elevator, office areas, lobbies, main exits, meeting rooms, corridors, parking lots and various major stores.

Result

The staff members were trained on the system. The system enables efficient nurse deployment, allowing staff members to keep watching on patients and have an appropriate response at all times.

It's most useful during lower staffing level periods, such as evening and night shifts. It also offers support for isolation wards, where staff must take particular care to protect themselves against infection or where access to patients is controlled. Satisfied with the performance and the affordable price of the video surveillance management system, the hospital manager consider in the future increasing the number of IP cameras, which is anticipated to involve 350.
